

# Exposure management

**SECURE THE ENTIRE ATTACK SURFACE THROUGH ONE PLATFORM.**

**>95%** of security professionals use at least two vulnerability scanners

**98%** say attack surface monitoring is a top 10 security priority

**THE CHALLENGE**

**Siloed, unmanaged attack surface**

Faced with increased threats in every domain, security teams are upgrading their vulnerability assessment tools across infrastructure, applications, and cloud environments, using specialized methods like RBVM, ASPM, and CAASM to manage risks in each area **independently**.

**THE SOLUTION**

**Comprehensive attack surface management**

Exposure management is the holistic antidote to siloed attack surface tools and methodologies. An exposure management solution consolidates disparate vulnerability data, correlating the relationships between the findings to gain a thorough understanding of the cyber risk posed to **entire attack surface**.

**Exposure management**

Complete attack surface management

**RBVM**

CVEs

**ASPM**

Cloud-native apps

**CAASM**

**Cloud vulnerability management**

Cloud Config

**THE KEY BENEFITS**

Gain a unified view of all digital assets and vulnerabilities

Manage risk effectively across the entire attack surface

Prioritize mitigation efforts based on holistic context

Communicate for informed decision-making

Measure risk remediation progress

**Manage one, secure all**

Vulcan Cyber lets security teams correlate, prioritize, and mitigate all vulnerability risks from one platform. It connects with diverse security tools across the entire attack surface for advanced services like application security posture management, cyber asset attack surface management, risk-based vulnerability management, and exposure and risk analytics.
